

TERRAIN MODEL SWITZERLAND

The multiform mountain world of Switzerland can be especially and impressively presented with a miniature terrain model. Even fine surface features such as river courses, brusque cliff formations, and yes, even the well-known glaciers are brought to within touching distance.

The surfaces to be presented can be varied as you wish, from individual ski resorts right up to the whole of Switzerland. You can decide on the implementation sizes. For detailed presentation surfaces, the model can be many square metres in size. However, even small „compact“ model bodies from 1 to 2 square metres in size can offer fascinating impressions, especially of a regional sector. Even as a jacket pocket format, for sale or as a hand out for advertising purposes is possible.

Manufacturing utilises highly precise satellite data, which with the aid of a computer controlled milling process, is converted into a scaled model.

An outstanding use is when the model bodies are used as part of a so-called Interactive Terrain Model (ITM).

Let us inform you about these unique forms of presentation.
